

Patient Care Supply Disruptions

Patients depend on healthcare supplies for lifesaving care. Yet natural disasters, pandemic, regulatory actions, bankruptcy, recalls, site fires, etc., wreak havoc on the healthcare supply chain, placing patients' lives at risk.

Uniquely Tailored to Healthcare Providers

SRS is the only cloud-based supply chain risk software tailored to the healthcare industry, enabling efficient collaboration with other healthcare providers. SRS has a unique software development approach where healthcare providers have set SRS enhancement priorities in weekly meetings since 2018.

Here are key differences cited by our customers:

	SRS	Others
Map and monitor supply chain	✓	✓
Tailored to healthcare providers	✓	✗
#1 in healthcare supplier data	✓	✗
Supplier risk prevention program	✓	✗
Financial Health Reports (FHR) [™]	✓	✗

SupplyRisk Prevent[™]

SRS offers the only program to actively manage suppliers until they reach low risk. This unique disruption prevention program has five main steps:

1. **Assess** supplier business continuity & geo risks
2. **Predict** suppliers most likely to suffer a disruption
3. **Assign** risk prevention actions to suppliers
4. **Train** suppliers to improve their risk prevention
5. **Manage** and support supplier improvements

SupplyRisk Prevent[™] is uniquely grounded in statistical models, based on millions of site disruption events. It assigns the most effective risk prevention actions to each supplier to cut their risks. SRS then assists suppliers through free training, templates, follow-up, and support.

SRS data proves that suppliers cut production disruptions by 60% by completing SRS risk prevention actions.

SupplyRisk Respond[™]

SupplyRisk Respond[™] collects data from suppliers and combines it with other third-party data sources to map supply chain production and distribution sites and give real-time awareness of supplier and logistic threats that impact a healthcare provider's supply chain:

1. **Map** production sites and key distribution hubs
2. **Monitor** threats to suppliers, sites, and logistics
3. **Identify** suppliers impacted by disaster events
4. **Plan** for any "What If" scenario

First, suppliers enter production sites, key distribution hubs and emergency contacts in the secure SRS website. SRS geo-codes and monitors the locations. SRS adds supply chain pedigree data based on public and private sources

Second, SRS alerts for supplier and logistics threats by email, phone app, and web portal. SRS analyzes millions of media articles a day for incidents like FDA actions, recalls, shortages, acquisitions, cyber-attack, labor, site fires, port issues, etc.

Third, when supplier production sites are in a disaster area, SRS contacts them to identify impacted suppliers, resulting in significant time savings for your team.

Fourth, analyze risks for unlimited "what if" risk scenarios and develop contingency plans for them.

SupplyRisk Financial[™]

SRS predicts over 90% of public company bankruptcies two years in advance. SupplyRisk Financial[™] combines real-time

market data & financial filings. The result is early and accurate bankruptcy prediction for all public companies in your BCP program.

Using market data plus financial reports provides earlier and more accurate prediction than financial reports alone. Markets react instantly and have proven predictive power while financial reports provide a comprehensive view.
